Writing a Print-Ready PDF from Adobe FrameMaker

To save a FrameMaker file as a PDF you need to have Adobe Distiller installed on your computer. FrameMaker does not include Distiller; you must purchase it separately.

The following directions on writing a Print-Ready PDF requires the installation of Acrobat Professional on the computer creating the PDF.

| Adobe | FrameMal | ker | | | | | |

| Links | |
| Create Named Destinations for All Paragraphs | |
| Named Destinations identify paragraphs that are referenced by cross-references and hypertext links. If you will add links to this document from other documents after the PDF file is created, turn this setting on. This option may significantly increase the size of the PDF file. | |
| If you always regenerate PDF files after adding new links, turn this setting off. This is the recommended setting. | |
| If your document was created with a version prior to 6.0, you will first need to use the Format>Document>Optimize PDF Size command before saving as PDF. | |
| Set Cancel (No Undo) | |

If you have any questions, please contact Coleen Acken (262) 369-6027
